SUMMARY

Fullstack Engineer with 4 years building production web applications across fintech, compliance, and security domains. Strong focus on scalable architecture, design patterns, and accessible UI. Proven track record shipping polished interfaces backed by clean, maintainable code. Experience spans AI-powered trading platforms, KYC onboarding systems, and zero-knowledge encrypted storage.

EXPERIENCE

uTrade Solutions *Punjab, India*

Senior Software Engineer *May 2024 – Present*

- Led frontend for **AI-powered, real-time interfaces** including multi-thread chat systems with streaming responses, in-app editors, and data-dense dashboards, serving **500+ active users**.
- Integrated AI-powered workflows using LLMs to deliver real-time conversational interfaces, intelligent content generation, and workflow automation, improving productivity and user engagement.
- Migrated legacy Angular codebase to React via Module Federation, allowing phased rollout alongside the existing app.
- Improved application **performance by ~40%** through code-splitting, lazy loading, and state-management optimization; **mentored 2 junior** engineers on review practices and component design.

uTrade Solutions *Punjab, India*

Software Engineer *August 2022 – May 2024*

- Owned full-stack application delivery on a **MERN-based admin platform** including REST APIs, MongoDB schemas, RBAC flows, and React UIs, collaborating directly with product and compliance teams.
- Refactored code duplication into reusable components, cutting bundle size by **35% (500 KB to 350 KB)** and measurably improving load times across products.
- Built **REST APIs in Node.js, Express, and TypeScript** with JWT auth, request validation, and clean modular routing. Followed **SOLID principles** and used established design patterns throughout

PROJECTS

Algo Trading Platform (uAlgos) — uTrade Solutions

- Built the **AI Trading Assistant** frontend multi-thread chat-based strategy builder with **websocket-streamed responses** (markdown to HTML) and a **custom in-app IDE** for editing AI-generated strategy artifacts; **reduced strategy design time by approx. 40%**.
- Developed a **calendar-style heatmap** visualizing backtest outcomes (max profit/loss, win/loss streaks) alongside a detailed trade-level breakdown enabled back tests with over **85% accuracy**.
- Implemented **CI/CD pipeline** for backend server with automated test, build, and deploy jobs, cutting release time.

eKYC Multi-Vendor Platform — uTrade Solutions

- Engineered a **dashboard with RBAC** across **4 roles** (admin, agent, RM, affiliate), securing review and approval workflows for **10,000+ KYC submissions**
- Integrated external APIs and SDKs, automating document retrieval and e-sign processes, which reduced manual workload by **up to 60%** and accelerated **verification time by 30%.**
- **Ensured UI/UX for responsiveness** across devices, resulting in **80% increase in user satisfaction** and faster customer onboarding.

Encrypted Cloud Storage (Cove Drive) — uTrade Solutions

- Built a **zero-knowledge encryption** system using a hybrid **AES (symmetric) + RSA (asymmetric)** model, ensuring data privacy is preserved client-side end-to-end.
- Implemented **password-protected file sharing** and chunked multi-file uploads with resumable transfer, improving upload reliability on unstable networks.

SKILLS

- **Languages:** TypeScript, JavaScript (ES6+), HTML5, CSS3
- **Frameworks & Libraries:** React, Next.js, Angular, Redux, React Query (Tanstack), Tailwind CSS
- **Backend & APIs:** Node.js, Express, MongoDB, REST, PostgreSQL, WebSocket, Firebase
- **Testing:** Jest, React Testing Library, Supertest
- **Architecture & Practices:** OOPs, SOLID principles, Design Patterns, Responsive Design, CI/CD, Agile Methodology, code review
- **Tools: Git,** Bitbucket, Docker, GitHub Actions, Postman, JIRA, Firebase Remote Config

EDUCATION

Panjab University *Chandigarh, India*

Bachelor of Engineering in **Computer Science** *2018 – 2022*
